

OCTAVIO M. TOLEDO

Software Engineer · Java Backend · Microservices · API Integrations

Mendoza, Argentina | +54 9 2634 280036 | octatoledo7@gmail.com | LinkedIn | GitHub | Portfolio

PROFILE

Software Engineer focused on Java and the Spring ecosystem, with experience building and maintaining a production **SaaS ERP** on a microservices architecture. I take part in architecture decisions, REST API design, third-party system integration and production incident resolution, turning business rules into maintainable software. Experienced applying Hexagonal Architecture, DDD and SOLID, with asynchronous messaging (RabbitMQ) and authentication via Spring Security/JWT. I build maintainable, scalable and resilient software through architecture decisions made for the long term.

HIGHLIGHTS

- Development and maintenance of a **production SaaS ERP** on a microservices architecture (Java/Spring Boot, NestJS, RabbitMQ), taking part in the team's technical decisions.
- Design and implementation of **integrations with external systems** (couriers, e-commerce, payments and electronic invoicing), unified into a single module to simplify ERP maintenance.
- Development of a **custom management system** for a business with ~200 clients, solving its core payment-traceability problem with an auditable record.

PROFESSIONAL EXPERIENCE

Software Engineer — Java Backend — Aranni Brands (Freelance)

Remote · Oct 2025 - Present

Backend development and integration of external platforms for PowipSystem, a microservices-based SaaS ERP.

- Development of **ERP business modules** (sales, customers, stock control and administration) with Java, Spring Boot and Spring Data JPA, taking part in functional analysis and the definition of business rules with the team.
- Involvement in the system's **architecture decisions**: REST API design, analysis of third-party technical documentation and defining the approach for each integration.
- **Centralized** inter-service communication through an API Gateway (Spring Cloud Gateway) and unified authentication/authorization with Spring Security and JWT; asynchronous messaging between microservices with RabbitMQ and centralized event publishing.
- **Integrated external business systems** —couriers, e-commerce (Shopify), payment gateway (Mercado Pago) and electronic invoicing (SUNAT)—, unifying them into a single integrations module to avoid microservice proliferation and simplify maintenance.
- Designed those integrations with a focus on **resilience** (idempotency, HMAC webhook verification and verification states for ambiguous timeouts), preventing duplicate dispatches and sync losses with external platforms.
- **Production incident resolution and complex debugging**, plus testing of the flows and technical documentation of each module for the team.
- **Frontend** development when the feature requires it (dashboards and operational flows) with Next.js, React and TypeScript.

Stack: Java · Spring Boot · Spring Security · Spring Cloud Gateway · Spring Data JPA · RabbitMQ · NestJS · PostgreSQL · MySQL · Docker · Next.js

Gym Management System — Freelance

2026 · In progress

Design and development of a custom management system, currently in implementation, to digitize the management of ~200 members and replace a manual paper + Excel workflow.

- **Requirements gathering with the client** and iterative product definition, turning business needs into software.
- **End-to-end development** of the system —architecture, backend, frontend and implementation— for a business with ~200 active clients.
- Designed the **billing module with an immutable audit log** (who, when, how and receipt) to eliminate the critical error of unrecorded payments in the paper→Excel workflow.
- Automatic due-date control, overdue-members dashboard and revenue reports.
- Designed the **single-tenant architecture** prioritizing fast delivery over speculative complexity, documenting the trade-offs.

Stack: NestJS · PostgreSQL (Supabase) · React · Vercel

Programming Tutor — Freelance

2023 - Present

Technical mentoring for university students and junior developers.

- Lessons in Java, OOP, databases/SQL and Spring Boot, with exam preparation and problem solving.
- Strengthened my **technical communication** and my ability to explain complex concepts clearly.

TECHNICAL SKILLS

Backend	Java · Spring Boot · Spring Security · Spring Cloud Gateway · Spring Data JPA · Hibernate · JWT / OAuth2 · RabbitMQ · Maven · Gradle
Architecture	Microservices · Hexagonal Architecture · Clean Architecture · DDD · SOLID · REST APIs · UML Modeling
Integrations	API Integration · REST/HTTP APIs · Webhooks (HMAC) · Shopify · Mercado Pago · SUNAT · Data Synchronization
Databases	PostgreSQL · MySQL · MongoDB · Relational Modeling · Query Optimization
Frontend	React · Next.js · TypeScript · TailwindCSS
Tools	Git / GitHub · Docker · Postman · Swagger / OpenAPI · IntelliJ IDEA

EDUCATION

Universidad Tecnológica Nacional (UTN - FRM)
University Technical Degree in Programming
2024

UTN - FRM
Information Systems Engineering — Core cycle completed
2019 - 2021

CERTIFICATIONS

Backend with Node.js — Digit@lers

Introductory Web Development — UTN

LANGUAGES

Spanish Native · **English** Upper-intermediate (B2) · **Italian** Beginner (A1)
